	To access your own profile, you can click on your image icon on the header
1	**Validations for word count - at what point do words go from default colour to warning state to error state. Will fields have different character limits. Need to document in precise detail for dev**
2	**SHOW/HIDE Case Study Buttons** When being tagged in new CS, users should have the possibility to decideif they want to 'SHOW' them in their profiles or 'HIDE' them. So this will act as an activate and deactivate button depending on the User's willing.
3	**SHOW/HIDE more** They're only able to show 3 mentioned CS to the public but they have a hidden list of all of them so they can select which ones to show and which ones to hide. But never more than 3
4	**WORD COUNT** Each of the text boxes (included the Editing tool) has its own word limits so we added a countdown of word. When they reach zero, they can keep typing but the number turns negative and red (-34) which means they cannot save it/publish it but can keep typing so we don't break the moment of inspiration. When reaching the limit but negative, we block the typing (100 / -100).
